

# MARION DISPATCH

Publication of Marion Body Works, Inc. for our Commercial Truck Body Product customers and friends  
July 2002

If saving \$\$\$ is what you are looking for, we have what you need.

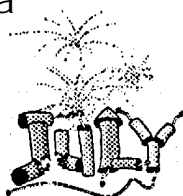

You can't see the biggest fuel robber of all - wind drag!

Head winds buffeting the front bulkhead of a body results in decreased fuel economy. The smooth streamlined shape of the Nose Cone causes air to flow evenly around the sides and over the top of the cargo box. Nose Cones reduce fuel consumption, extend engine life and reduce driver fatigue.

Your fuel savings with a Nose Cone depends on many factors: the type of body, height, speed, winds, cargo weight, route and driver. Nose Cone equipped straight trucks have produced savings as high as 37%. Factors affecting the savings include: loads type, weather, terrain and road speed. Nose Cone guarantee's a 10% fuel savings. Call us today to receive a quote and more information on Nose Cone.

We hope you all enjoyed a safe and happy 4th of July!!

## Smooth Side Production

Sliding ....UPWARDS!!

The Marion Smooth Side is priced right. Currently there is no additional charge for this feature. Smooth Sides are HOT and the price is on fire. Don't miss out on this opportunity to introduce yourself to this smooth aluminum surface. Your graphics installer will love it and you'll love the way your graphics look. No rivets, yet you still have sturdy sheet and post construction. Don't let the Smooth Side slip away on you, call today!

## Curtainsides - Built to withstand the test of time.

This 26' Buckle-Close Curtainside was one of four that was recently delivered in the Minneapolis area. Our curtainsides are made

tough to withstand the test of time. Our innovative buckle-close design combines strength, style and usability to ensure a long life. We build to your specifications, with custom colors and graphics available we are able to provide you with the exact truck body you are looking for. Your optional logo on the side will create a lasting impression as it is seen by thousands of potential customers. Call today to receive your curtainside quote today!

# Thought Provoking.....

Only those who risk going too far will ever know how far they can go.

## Cargo Control Options

Cargo comes in all shapes and sizes; therefore requires many different devices to secure it. Horizontal Series E track and vertical double slotted series A are two very popular options used in the industry.

Here are a few different devices that can be used with the tracks. 2" logistic straps are great for securing awkward items that need to be strapped in place.

When used with a commercial grade 2 x 6 piece of lumber, wood beam sockets provide an easy way to secure a load.

A fitting with a 2" D-ring is used with rope, this fitting easily slides in and attaches to the A or E track making a convenient space saving way to secure your load.

A beam system allows your customer to optimize the usable van cube for a variety of different applications. These beams are easily adjustable at a variety of locations.

*Two levels of palletized cargo*

The next time you are puzzled over what might be the best cargo control option for you, give us a call and we will be happy to help you with a variety of solutions.

*A Tradition of Quality*
